Saskatchewan's Top Agri-Food Import Markets, 2025	25

All export calculations are based on international exports from Saskatchewan. Some of the totals of Saskatchewan's lesser exported commodities may have been over or under-reported, which is a result of interprovincial trade. All trade statistics were taken from Global Trade Tracker and are subject to revision and change.

Export values are rounded totals. The year-to-year percentage change is calculated using actual export values. This approach was used in all subsequent tables.

Fundamental Factors

Saskatchewan's annual agri-food exports reached \$18.0 billion(B) in 2025 – the fourth-highest value on record, following two consecutive years of high export volume. In 2025, Saskatchewan export volume was 41.9 million metric tonnes (MMT), an almost 10 per cent increase in export volume from 2024. The decrease in export value from 2024 could be attributed to a combination of factors that include market dynamics, abundant supplies on the world market, market access and trade issues that caused Saskatchewan exporters to divert product away from traditional markets.

In 2024-25, value-added processing continued its upward growth trajectory. Saskatchewan's value-added revenue was estimated to be a record \$8.4B and a 98 per cent increase since 2014. Saskatchewan's food manufacturing sector represented approximately 95 per cent of the province's total value-added revenue. Furthermore, approximately 78 per cent of the total food manufacturing revenue is attributed to grain and oilseed processing. In 2025, value-added exports were \$4.6B – a growth of 83 per cent since 2014. Value-added exports comprised 26 per cent of total agri-food exports in 2025. Canola oil, canola meal and processed oats were Saskatchewan's top value-added export products. Canola oil and canola meal are the third and sixth largest agri-food exports respectively.

There was an almost 10 per cent increase in export volume, due to a large production of crops in 2024 and 2025 at 35.5 MMT and 41.9 MMT respectively. This increase in production enhanced the available supplies for exports, which aligns well with the increasing need for agriculture to address global concerns about food security.

Prices in 2025 decreased as compared to 2024, continuing the trend of decline in global commodity prices attributed to increased global production and trade disruptions, such as the war in Ukraine. However, record Saskatchewan crop production in 2025 helped offset price decreases, resulting in a strong performance of \$18B in exports for 2025.

The United States (U.S.) dollar weakened significantly in mid-2025 and later rebounded. The volatile U.S. dollar has adversely affected Canadian exports, reducing the value of total exports to the U.S. even though total export volumes increased.

In 2025, Saskatchewan navigated geopolitical and economic hurdles, primarily punitive tariffs from major trading partners and global trade uncertainty which impacted trade. With the disruptions, many countries are exploring diversification options for their sources of agrifood products. During this period, Canada reinforced its reputation as a reliable and trusted source of high-quality agricultural products.

In recent years, Canada has seen increased competition in traditional export markets for peas. In 2025, Russia continued to export significant quantities of peas to India and China. However, the easing of geopolitical tension between Canada and other parts of the world are promising for agri-food exports of canola products and peas for 2026.

Agri-Food Exports Overview

Saskatchewan's agricultural exports were worth a total of \$18B in 2025. The 2025 export value was a decrease of 3.0 per cent over the previous year of \$18.5 billion in 2024, which itself was a decrease of 8.4 per cent compared to 2023. Leading agri-food export commodities in 2025 continue to be non-durum wheat, canola seed, canola oil, durum, and lentils. The top five international market destinations were the U.S. (\$4.9B), China (\$2.3B), Japan (\$1.2B), Mexico (\$906 million), and Algeria (\$674 million). In 2025, agri-food exports represent more than 40 per cent of total value of Saskatchewan exports of \$43.6B. The province remains one of Canada's leading agri-food exporters, with a global reputation as a reliable supplier of safe, high quality, sustainably produced agri-food products.

Nationally, Canadian agri-food exports in 2025 were up 0.8 per cent in value, with sales of \$101.2B. Saskatchewan is the nation's second largest agri-food exporter, representing 18 per cent of total Canadian agri-food exports, behind Ontario at \$29.2B. Saskatchewan continues to nurture trade relationships in priority markets while recognizing and growing opportunities in emerging markets.

Saskatchewan has grown its agricultural exports by almost 30 per cent since 2014. The province's expanding international market presence is supported through the network of nine international trade and investment offices in Germany, the United Kingdom, the United Arab Emirates (UAE), Mexico, Vietnam, Japan, India, China and Singapore.

The value-added processing and agriculture sectors are major components of Saskatchewan's Growth Plan goals, which include increasing crop production to 45 million tonnes, agriculture exports to \$20B, and value-added revenue to \$10B by 2030. Saskatchewan agri-food markets are diverse; the province exported over \$300 million worth of agri-food products to 14 different countries in 2025.

The strength and diversity of Saskatchewan's production base is ideal for many types of ingredient processing, including ingredients for a variety of healthy foods such as plant-based alternatives, cereals, beverages, baked goods, snacks, and bars. In 2025, a facility expanded its canola crush capacity in Yorkton, a new flax processing facility opened in Delisle, and construction continued for a federally inspected meat processing facility in Saskatoon.

Agri-Food Exports by Product

Saskatchewan exported more than \$6.7B worth of canola products, \$6.6B worth of cereals and \$2.4B worth of pulse products in 2024.

In 2025, the value of Saskatchewan agri-food exports for seven of Saskatchewan's top 10 export commodities decreased. There was an almost 10 per cent increase in export volume, primarily due to a record growing season in 2025 and another strong season in 2024. The value of exports increased for three of Saskatchewan's top 10 exported commodities in 2025 compared to 2024.

Oilseeds¹

In 2025, Saskatchewan exported \$4.0B worth of oilseeds (canola seeds, soybeans and flaxseed) to the world, which was comparable to 2024 (\$4.1B). Key markets continued to be China, Japan and Mexico.

Exports to the European Union (EU) increased by 154 per cent, up from \$355M in 2023 to \$900M in 2025. The EU imports canola seed/rapeseed mainly for their biofuels industry while flaxseed is regaining historical market share. Exports remain down from 2020 when the exports of oilseeds to the EU exceeded \$1B. The EU is a volatile market for Saskatchewan.

Canola

In 2024, canola exports from Saskatchewan were \$6.7B, over 35 per cent of Saskatchewan's agri-food exports.

Saskatchewan's canola seed exports decreased by 11 per cent compared to 2024, with an export value of \$2.9B. Significant increases in the export value to the top 10 markets included Japan (77 per cent), Mexico (81 per cent) and France (257 per cent). Export values decreased in two of the top 10 markets, most notably, China (63 per cent) and the U.S. (43 per cent).

In 2025, Saskatchewan's canola oil exports totalled \$2.8B, a decrease in value of five per cent compared to 2024. However, the quantity exports decreased by almost four per cent reflecting an overall drop in prices in 2024. The U.S. is by far the largest market, with exports of \$2.2B or almost 80 per cent of our canola oil exports. Mexico is our second largest market, with exports of \$249M, almost 10 per cent of our canola oil exports.

In 2025, Saskatchewan's exports of canola meal total \$1.0B which is a 14 per cent decrease compared to 2024. The U.S. and China are Saskatchewan's top canola meal markets. Exports to the U.S. decreased by nine per cent, with exports worth \$610M. Canola meal exports to China decreased by almost 60 per cent, with exports of \$205M. Exports by volume increased overall by 24 per cent in 2025 totalling 3.1 million metric tonnes.

Flax

The value of Saskatchewan's exports of flaxseed increased slightly in 2025 to \$198M from \$179M in 2024, alongside export volume increasing by nine per cent. The U.S. and Belgium are the province's major markets for flaxseed with \$86M and \$60M, respectively. Exports to China continue to drop from historical levels in 2025 with exports valued at \$19 million.

¹ Saskatchewan does not currently produce sizable amounts of soybeans. Saskatchewan soybean exports do not match production with potentially a portion of Manitoba's production being included in Saskatchewan export totals.

Cereals

Exports of Saskatchewan cereal grains increased 10 per cent in 2025, from \$6.0B in 2024 to \$6.6B in 2025.

Non-Durum Wheat

In 2025, the province's exports of non-durum wheat (mostly Canadian Western Red Spring Wheat) increased by 17 per cent in value, and 23 per cent in volume, totalling \$3.7B worth of exports. All the major export destinations including China, Indonesia, Japan, U.S., Peru and Bangladesh saw increasing or flat non-durum wheat shipments in 2024. Non-durum wheat exports to China, Ecuador and Bangladesh experienced the largest increases with growth of 45, 72 and 31 per cent by value respectively.

Durum Wheat

Saskatchewan's exports of durum were flat with \$1.8B in 2024 and 2025. The volume of exports, however, increased by 17 per cent, reaching 4.3 MMT. Algeria was our top durum export destination with sales of \$503M, an increase of 28 per cent compared to 2024. Exports to Italy, Morocco, U.S. and Japan all declined by at least 10 per cent by value.

Oats

In 2025, the value of the province's exports of oats decreased by two per cent to \$329M, while the volume increased by one per cent. The U.S. is the largest oats destination by far, accounting for over 75 per cent of oats exports. Japan saw export increases in 2025 while Mexico experienced a large decrease of 37 per cent by value.

Barley

Saskatchewan's exports of barley decreased 13 per cent in 2025, from \$447M in 2024 to \$391M. Exports to China decreased but overall remained strong at \$237M, accounting for 60 per cent of Saskatchewan's barley exports. Japan and the U.S. accounts for most of the remaining exports at \$90M and \$31M respectively.

Saskatchewan does not currently produce sizable amounts of corn/maize. Saskatchewan corn/maize exports do not match production with potentially a portion of Manitoba or Alberta's production being included in Saskatchewan export totals.

Pulses

Saskatchewan's total pulse (lentils, peas and chickpeas) exports of \$2.5B in 2025 saw a decrease of 21 per cent when compared to 2024.

Lentils

In 2025, lentil exports decreased in value by 23 per cent in 2025. Saskatchewan exported 1.5 MMT of lentils worth \$1.5B in 2025. India, Türkiye, and the UAE continue to dominate lentil trade, accounting for almost 42 per cent. Exports to India and Türkiye decreased by 43 and 51 per cent respectively in 2025. Lentil exports to Morocco, however, increased to \$86M in 2025 from \$74M in 2024.

Dry Peas

Pea exports declined by 28 per cent in 2025 to \$697M, down from exports worth \$965B in 2024. China remains a priority pea destination, however increased competition from Russia has begun to erode Saskatchewan's market share. Exports to India fluctuation from year to year with exports of \$145M in 2025.

Chickpeas

Saskatchewan's chickpea export market was worth \$249 in 2025, with Pakistan and the U.S. dominating destinations with 24 and 15 per cent, respectively, of total Saskatchewan exports. Other destinations include Italy, Türkiye and Spain.

Livestock

Live Cattle

Saskatchewan's livestock industry depends on both inter-provincial and international trade. Based on Saskatchewan inspection certificates for cattle, from August 2024 to July 2025, Saskatchewan exported 1.2 M head of cattle. Most of these were inter-provincial exports of cattle, Alberta being the largest inter-provincial export-destination with over 963,758 head.

The U.S. market makes up 99 per cent of Saskatchewan's international live cattle exports. In 2024, Saskatchewan's exports of live cattle decreased by nine per cent in number of head (50,636 head) but increased by three per cent in value at \$163M.

The U.S. cattle herd has shrunk to a 75-year low; drought and high input costs compelled ranchers to market a higher than-normal percentage of female cattle that would typically be held back for replacement (breeding) purposes. Because of the lower inventories in addition to inflation and continued high demand for beef, producers are still seeing elevated prices for their cattle, further incentivizing them to reduce their herds.

Live Swine

In 2025, Saskatchewan exported a total of 506,265 head of live swine to the United States, up eight per cent compared to 468,667 in 2024. Record high feeder pig prices in the U.S. in 2025 helped Saskatchewan live hog sales total \$55M to Canada's largest buyer, an increase of 73 per cent in dollar value from 2024. Canadian live swine sales totalled \$58M in 2025, up 66 per cent in dollar value from 2024.

Saskatchewan's Top Agri-Food Export Markets, 2025

Out of Saskatchewan's top 15 agri-food export markets, 10 countries showed growth in the value of exports in 2025. The most significant increases were seen in Netherlands, Mexico, Bangladesh and Japan. Exports to the U.S., China, Morocco, India and Indonesia declined in 2025.

In 2025, Saskatchewan exported \$300M worth of agri-food products to 14 different markets. Saskatchewan agri-food export markets continue to be dominated by the U.S. with 27 per cent, followed by China with 13 per cent, and Japan with seven per cent of total exports.

Saskatchewan's agri-food exports to many countries in the EU, North Africa and Middle East fluctuate depending on weather conditions and their impact on local productions, available supplies and prices from other competitors, and other market considerations (stocks, supply chain, tariffs and trade policies).

Over the last year, fundamental factors including rising global tensions and increased competition have caused uncertainty in global trade. As an effect, international markets have begun diversifying their suppliers of agri-food products due to the unreliability of certain markets and in an effort to protect and ensure a secure food supply for their country.

Despite the uncertainty of the future, Canada and Saskatchewan have delivered outstanding results and are recognized as a trusted, safe, stable, and reliable supplier of a wide range of high-quality agri-food products and commodities.

Non-Durum Wheat
