

Notification of Medical Condition

Notifiable Medical Conditions Resulting from Occupational Exposure

According to subsection 2-4(2) of The Occupational Health and Safety Regulations, 2020, a physician finding a person affected with or suffering from a notifiable disease (listed in Table 6 of the regulations) must notify the director of occupational health and safety without delay. This notification form is intended to assist physicians in this requirement. This completed form can be emailed to ohs.executiveoffice@gov.sk.ca or submitted by confidential fax to 306-798-0126.

Notice Requirements

Medical information

2-4(1) Subject to subsection 3-10(2), no person who acquires information of a personal medical nature with respect to a worker pursuant to these regulations shall disclose that information except:

- (a) to the worker;
- (b) to the chief occupational medical officer;
- (c) with the informed consent of the worker, to another person; or
- (d) where otherwise required by law.

(2) A physician who attends or treats a worker who is suffering from or believed to be suffering from a medical condition that is related to the present or past employment of the worker and is listed in Table 6 of the Appendix shall, without undue delay, inform the director of:

- (a) the medical condition from which the worker is believed to be suffering; and
- (b) the name and address of the most recent place of employment where exposure related to the medical condition is believed to have occurred.

TABLE 6
[Subsection 2-4(2)]

Notifiable Medical Conditions Resulting from Occupational Exposure

- ☐ Acute, sub-acute or chronic disease of an organ resulting from exposure to lead, arsenic, beryllium, phosphorus, manganese, cadmium or mercury or their compounds or alloys
- ☐ Neoplasia of the skin or mucous membrane resulting from exposure to tar, pitch, bitumen, mineral or cutting oils or arsenic or their compounds, products or residue
- ☐ Neoplasia of the renal tract in a worker employed in rubber compounding, in dyestuff manufacture or mixing or in a laboratory
- ☐ Pneumoconiosis resulting from exposure to silica or silicate, including asbestos, talc, mica or coal
- ☐ Toxic jaundice resulting from exposure to tetrachloroethane or nitro- or amidoderivatives of benzene or other hepato-toxic or haemato-toxic substances
- ☐ Neoplasia or any form of sickness resulting from internal or external exposure to ionizing radiation or electro-magnetic radiation
- ☐ Poisoning by the anti-cholinesterase action of an organophosphorous or carbamate compound
- ☐ Any form of decompression illness
- ☐ Toxic anaemia resulting from exposure to trinitrotoluene, or any other haematogenic poison, including chronic poisoning by benzene
- ☐ Mesothelioma of the pleura or peritoneum
- ☐ Angiosarcoma of the liver
- ☐ Malignant neoplasm of the nasal cavities resulting from exposure to chromium or its compounds, wood dust or formaldehyde
- ☐ Malignant neoplasm of the scrotum resulting from exposure to petroleum products
- ☐ Malignant neoplasm of lymphatic or haematopoietic tissue resulting from exposure to benzene
- ☐ Cataract resulting from exposure to ionizing radiation, electro-magnetic radiation or nitrophenols
- ☐ Male infertility resulting from exposure to glycol ethers, lead or pesticides
- ☐ Spontaneous abortion resulting from exposure to ethylene oxide or antineoplastic drugs
- ☐ Inflammatory and toxic neuropathy resulting from exposure to organic solvents
- ☐ Asthma resulting from exposure to isocyanates, red cedar, amines, acid anhydride, epoxy resin systems, reactive dyes, metal fumes or salts, enzymes or bisulphites
- ☐ Extrinsic allergic alveolitis resulting from exposure to mould or organic dust.
