

Chronic Wasting Disease Prevalence

Male Mule Deer (2020-2022)

Wildlife Management Zones

CWD 3-Year Pooled Prevalence (* Male Mule Deer)

- 11-30 %
- 31-49 %
- > 50 %
- ** CWD positive - Data deficient
- Not detected

Please note: Prevalence estimates are based on last three years' (2020-2022) pooled surveillance data for male mule deer. Prevalence estimates are estimates only. Confidence intervals vary based on sample size collected.

* Prevalence rates in male and female mule deer vary. On average, prevalence rates in male mule deer are 2x those in female mule deer, however, variation exists across WMZs.

** Insufficient sample size (< 15) obtained to estimate prevalence.
