

Human Well-Being

Resilient Buildings: Facilities That Keep Public Work Safe and Steady

The Ministry of SaskBuilds and Procurement (SBP) monitors the buildings it manages by carrying out regular assessments that look at safety, building condition, energy use, ventilation and maintenance needs. These reviews help identify issues early and support the well-being of the people who work in these spaces. SBP has completed resiliency risk management plans for about 60 public facilities, examining potential challenges such as water supply disruptions, drought, fire, smoke-related air quality, power outages and other operational concerns. A provincewide study of backup power systems has also strengthened preparedness across all SBP facilities.

Why It Matters

Regular risk assessments help buildings stay ready for the unexpected. By tracking potential hazards and planning ahead, SBP improves emergency preparedness and supports safer, more reliable workplaces. These assessments also help facilities adapt to environmental variability, protect essential operations and maintain the well-being of employees and visitors.
