Building Knowledge for Responsible Agricultural Water Management

[AgH2Onward](#) is a free, self-paced learning program offered by the Water Security Agency. It helps participants better understand how agricultural water is managed in Saskatchewan. The program explains the Water Security Agency's Agricultural Water Management Strategy, outlines how drainage approvals work, and walks through the tools and steps involved in applying for approval.

AgH2Onward is organized into five modules that use short videos, plain-language reading materials, workbooks and additional resources. The course reflects current Water Security Agency programs and policies and is designed for agricultural producers, rural municipality administrators, conservation and development associations, watershed associations and independent consultants seeking designation as Qualified Persons. Overall, the program supports informed water management decisions and helps strengthen farm resilience in the face of environmental variability.

Why It Matters

Drainage plays an important role in helping Saskatchewan farmers manage water on their land. When planned and used responsibly, it can improve efficiency, support healthy soils and contribute to food security. Building strong knowledge of drainage and water management helps protect downstream communities and natural systems while supporting environmental stewardship and landscape resilience.
