

9.28 Release Notes

IRIS Version 9.28

Release Date: October 7, 2026

9.28 Release Notes Publication Date	Notes and Changes Made
October 7, 2026	Initial Release

About

IRIS Version 9.28 Release implemented 14 items. In addition to the changes detailed below, various enhancements and fixes to known defects were implemented to various IRIS Modules.

What's changed?

The highlights of what has changed in IRIS Version 9.28 release are noted below.

Note: Whether a user has access to the functionality, or enhancements outlined in these 9.28 Release Notes will depend on the individual's security access and assigned permissions sets.

Infrastructure Functionality

- Incident obligations and associated billing responsibilities are now automatically reassigned to the current responsible Business Associate (BA) when responsibility changes because of a Licence Transfer, BA Amalgamation, or Source Licensee update. The update applies to the following Incident obligations:
 - Submit Incident Root Cause Analysis Report
 - Submit Pipeline Incident Investigation Report
 - Submit Annual Incident Report
 - 90 Day Detailed Incident Information Required (Billable)
 - Manual Incident Obligation (Billable)
- The *Pipeline Segment Details* page now automatically updates the "From Infrastructure Type" and "To Infrastructure Type" fields to "Blind End" when a pipeline or flowline is discontinued or abandoned. Additionally, pipeline and flowline segments with a status of *Abandoned* or

Discontinued were also updated where either infrastructure field did not reflect “*Blind End*.”

- Resolved issues affecting bulk downloads of *Generic Authorization Details* from the *Associated Entities* tab. Users can now download authorization details without triggering system errors, resulting in improved reliability and performance.
- *Incident Search* has been enhanced to allow users to download a CSV report for queries by *Incident ID*, *Incident Details*, *Licence Number*, and *Incident Flags*. Validation now requires at least one criterion for *Search by Incident Details* and selection of a *Flag Type* for *Search by Incident Flags*. In addition, when *Source Licence Type* is set to *Pipeline Licence* under *Search by Licence Number*, users can optionally enter a Segment ID to locate incidents by Pipeline Segment ID.
- A new Disposition Type, Helium and Associated Gases Permit, has been added to the system. This disposition type will be issued for all helium and associated gases permits acquired through conversion or helium and associated gases public offerings. This enhancement supports *the Oil and Gas Tenure Registry Regulations* amendments.

Energy and Resources Training Modules

Online Training courses for the Integrated Resources Information System (IRIS) can be found [here](#).

Security and Permission Sets

The following changes were made to listed IRIS permission sets.

Industry

- No new Permission Sets added.
- No new Permissions added to existing Permissions Sets
