## **SASKATCHEWAN SUNFLOWER COMMITTEE CO-OPERATIVE TRIALS**

**The Saskatchewan Sunflower Committee is organized under the authority of the Non-Profit Corporations Act of the Province of Saskatchewan. The Committee is voluntary and not organized for financial gain and declares no dividends.**

**The Saskatchewan Sunflower Committee was formed in 1983 to test varieties that may be suitable for growing conditions in the Province.**

**The Committee publishes an annual summary of test results. Varieties that are registered for production in Canada and that are tested in Saskatchewan Sunflower Committee Trials are entered in the Varieties of Grain Crops for Saskatchewan annual publication.**

**All sites were arranged in randomized complete block designs.**

**Oil content was done by Nuclear Magnetic Resonance (Bruker minispec) on samples that were dried to less than 4% moisture.**

**In 2010 the entries were grown in a single trial with a target plant population of 55,000 -60,000 plants per hectare (22,000 to 24,000 plants per acre). AC Sierra had a target population of 110,000 plants per hectare (45,000 plants per acre). 63A21 the check was grown at both target densities.**

**The trial at Tribune had damage from birds to 63A21 and AC Sierra. AC Sierra had poor seed germination and its yield data is not included in this report. Due to excess moisture Canora was seeded very late and is not included in this data set.**

**William May Agriculture & Agri-Food Canada, Indian Head, coordinated all tests. The Committee would like to thank Craig Stevenson for statistical analyses.**

### **CO-OPERATORS**

**Bryan Nybo, Wheatland Conservation Area Inc**

**Cecil Vera, AAFC**

**Terry Hogg, AAFC**

**William May, AAFC**

**Andrew Seversen, East Central Research Foundation**

**Desmond McKenzie**

**Swift Current**

**Melfort**

**Outlook\*\***

**Indian Head**

**Canora**

**Tribune**

**\*\* irrigated site approximately 50 mm of applied**
