

Crop Report

For the Period September 12 to 18, 2023

Published by the Ministry of Agriculture
ISSN 0701 7085
Report number 20, September 21, 2023

Producers have made the most of another dry week in Saskatchewan with harvest now 82 per cent completed. This is ahead of the five-year average of 64 per cent and the 10-year average of 62 per cent. Producers are hoping for timely rains once harvest is complete.

Harvest in the southwest is essentially complete with 97 per cent of the crop off. Only a few flax acres remain in the region. The west-central region continues to make great progress with 92 per cent of this year's crop harvested. The southeast has 79 per cent, followed by the northeast and northwest at 75 per cent and finally, the east-central region has 66 per cent harvested.

Producers mainly focused on harvesting oilseed crops this week and made substantial progress. Canola is now 65 per cent complete across the province, up by 23 per cent over last week. Mustard is 97 per cent complete, soybeans are 47 per cent and flax is 39 per cent. Oat harvest has also progressed rapidly, with 79 per cent of the crop harvested, an increase of 21 per cent from last week. Durum is 94 per cent complete, barley is 92 per cent and spring wheat is 88 per cent. Chickpea harvest progressed, with 87 per cent of the crop off. Harvest of fall cereals, canary seed, peas and lentils is complete for the year.

Minimal rain was seen this week, with the Stoughton area receiving the most rain at 10 mm. The lack of significant rain led to topsoil moisture once again decreasing. Twenty-five per cent of cropland has adequate topsoil moisture, 49 per cent is short and 26 per cent is very short. Twenty per cent of hay and pastures have adequate moisture, 49 per cent is short and 31 per cent is very short.

Pasture conditions remain relatively unchanged. Twelve per cent of pastures are in good condition across the province, while 31 per cent are fair, 35 per cent are in poor condition and 22 per cent are in very poor condition. Producers will need multiple significant rain events to improve soil moisture for pasture quality to improve.

Crop damage continues to be caused by drought conditions and grasshoppers. This week crops were also damaged by light frosts, wind and wildlife.

One year ago

Some cool, damp weather moved through the province this week and slowed harvest progress. The province had 73 per cent of harvest complete for the year. The warm and dry weather from previous weeks was taking a toll on topsoil moisture; 40 per cent of cropland was short and 42 per cent of hayland and pasture was also short.

Crop Report

For the Period September 12 to 18, 2023

Published by the Ministry of Agriculture
ISSN 0701 7085
Report number 20, September 21, 2023

Producers are currently busy with harvest, spraying post-harvest weed applications, working their fields and hauling grain. Many are also hauling bales, preparing feed for winter and marketing cattle.

Harvest is a very busy and stressful time for producers. They are reminded to take safety precautions in all the work they do. This includes having fire mitigation resources at the ready and taking precautions when working around powerlines. The Farm Stress Line is available to provide support to producers toll free at 1-800-667-4442. The public is reminded to take extra caution, time and space when encountering machinery on the roads.

Southeastern Saskatchewan:

- Crop District 1 – Carnduff, Estevan, Redvers, Moosomin and Kipling areas
- Crop District 2 – Weyburn, Milestone, Moose Jaw, Regina and Qu'Appelle areas
- Crop District 3ASE – Radville, Minton and Lake Alma areas

With limited rain, producers in the southeast were able to stay in the fields this week and harvest is now 79 per cent complete. This is ahead of the five-year average of 74 per cent.

Spring seeded cereals are nearing completion in the region, with durum being virtually complete, barley is 93 per cent, oats 92 per cent and spring wheat 89 per cent complete. Oilseeds are now the main focus for producers, with 77 per cent of mustard in the bin followed by 62 per cent of canola, 48 per cent of soybeans and 42 per cent of flax. Chickpeas are 87 per cent harvested and canary seed is 53 per cent complete. Harvest of fall cereals, peas and lentils is complete.

Minimal rain was received in the southeast this week, with the most, 10 mm, received in the Stoughton area. Topsoil moisture is becoming limited, with 30 per cent of cropland having adequate moisture, 43 per cent is short and 27 per cent is very short. Twenty-nine per cent of hay and pastures have adequate topsoil moisture, 43 per cent are short and 28 per cent are very short.

Pastures are showing the effect of a dry summer in the southeast. Nine per cent of pastures are in good condition, 29 per cent are in fair condition, 40 per cent are poor and 22 per cent are very poor.

Crop damage this past week is due to drought and grasshopper damage. Producers are busy combining, applying post-harvest herbicides and working harvested fields. Many producers are hauling bales, feed and water for animals.

Southwestern Saskatchewan:

- Crop District 3ASW – Coronach, Assiniboia and Ogema areas
- Crop District 3AN – Gravelbourg, Mossbank, Mortlach and Central Butte areas
- Crop District 3B – Kyle, Swift Current, Shaunavon and Ponteix areas
- Crop District 4 – Consul, Maple Creek and Leader areas

With only a few acres left standing, the southwest is beginning to wind down their harvest operations. The southwest is now 97 per cent complete, ahead of the five-year average of 86 per cent.

Both fall and spring cereals are completely harvested in the southwest, as well as mustard, peas and lentils. Flax is the least harvested crop, with 41 per cent in the bin. Canaryseed and chickpeas are both 94 per cent harvested for the year. Canola is very near completion, with 96 per cent of the crop harvested for the year.

Very little rain was seen in the southwest this week. Two mm was the most reported, received in the Vanguard region. Topsoil moisture is very limited in the region; 50 per cent of cropland and hay and pastures is short and 50 per cent is very short.

Pastures have taken the brunt of the heat and dry conditions this year. Eighteen per cent of pastures in the southwest are in fair condition, 40 per cent are in poor condition and 42 per cent are in very poor condition.

Crop damage this past week continues to be due to drought and grasshoppers. Many producers are working their fields for the fall and preparing for winter. Producers are also hauling feed, bales and water for animals and some are marketing cattle. Producers across the region are hoping for wet snow this fall, an abundance of snow this winter and significant amounts of rain before the next crop. Without it, many fear what next summer has in store for their operations.

East-Central Saskatchewan:

- Crop District 5 – Melville, Yorkton, Cupar, Kamsack, Foam Lake, Preeceville and Kelvington areas
- Crop District 6A – Lumsden, Craik, Watrous and Clavet areas

Due to a lack of rainfall, producers were able to combine with minimal interruptions. The region is now 66 per cent completed harvest, ahead of the five-year average of 56 per cent.

Producers are finishing up their spring seeded cereals and are now focusing on their canola harvest. Durum is 87 per cent complete, barley is 82 per cent, spring wheat is 78 per cent, oats are 60 per cent and canary seed is 19 per cent. Mustard harvest is complete for the year, canola is 48 per cent complete and soybeans are 34 per cent harvested. Peas and lentils are completely harvested and little progress has been made in chickpeas.

The Goodeve area received the most rain in the region this week, recording seven mm. Topsoil is mostly short in the region, with 33 per cent of cropland having adequate moisture, 60 per cent is short and seven per cent is very short. Twenty-one per cent of hay and pastures have adequate moisture, 66 per cent are short and 12 per cent are very short.

Pastures are in relatively good condition in the region, with three per cent of pastures in excellent condition, 10 per cent are in good condition, 51 per cent are fair, 34 per cent are poor and two per cent are very poor.

Minimal crop damage was reported this week in the region. Producers are busy combining while the nice weather lasts and are beginning their fall field work. Producers are also preparing winter feed supplies and marketing cattle.

West-Central Saskatchewan:

- Crop District 6B – Hanley, Outlook, Loreburn, Saskatoon and Arelee areas
- Crop District 7A – Rosetown, Kindersley, Eston and Major areas
- Crop District 7B – Kerrobert, Macklin, Wilkie and Biggar areas

The end of harvest is quickly approaching for many producers in the west-central region, with 92 per cent of harvest completed. This is ahead of the five-year average of 72 per cent.

Producers have now completed harvest of peas, lentils, mustard, soybeans and fall cereals. Spring cereals are virtually complete with spring wheat being 95 per cent harvested, durum is 98 per cent, barley is 97 per cent, canary seed is 94 per cent and oats are 91 per cent complete. Producers are focusing on getting their last oilseed field combined, with 84 per cent of canola and 61 per cent of flax harvested for the year.

Minimal rain was received in the west-central region this week. The Smiley area received the most rainfall, recording five mm. Topsoil moisture is limited in the region, with six per cent of cropland having adequate topsoil moisture, 51 per cent is short and 43 per cent is very short. Three per cent of hay and pastures have adequate moisture, 27 per cent are short and 70 per cent are very short.

Pastures are showing the effects of the dry conditions during the growing season. Five per cent of pastures are in good condition, 17 per cent are fair, 42 per cent are poor and 36 per cent are in very poor condition.

Crop damage this week is due to wind, grasshoppers and drought. Many producers are finishing up their harvest operations and are working their fields for the fall and applying post-harvest herbicides. Many are also bringing cattle home for the winter, hauling bales and preparing winter feed sources. Producers are hoping for significant moisture after their harvest operations are complete to replenish soil moisture for next year's crop.

Northeastern Saskatchewan:

- Crop District 8 – Hudson Bay, Tisdale, Melfort, Carrot River, Humboldt, Kinistino, Cudworth and Aberdeen areas
- Crop District 9AE – Prince Albert, Choiceland and Paddockwood areas

Producers in the northeast made the most of the dry weather and have now completed 75 per cent of their harvest. This is ahead of the five-year average of 52 per cent.

Producers in the region have made great progress harvesting all crop types this past week and are now focusing on getting their oilseeds in the bin for the year. Fifty-five per cent of canola is harvested so far, while 18 per cent of flax is in the bin. Barley is 97 per cent complete, spring wheat is 93 per cent, oats are 86 per cent and canary seed is 62 per cent. Chickpeas are 51 per cent harvested for the year. Fall cereals, durum, lentils and field peas are completed for the year.

The Tisdale area received the most rain this week, recording 6.8 mm. Topsoil moisture in the northeast is still adequate. Seventy-five per cent of cropland has adequate topsoil moisture and 25 per cent is short. Two per cent of hay and pastures have a surplus of topsoil moisture, 66 per cent have adequate moisture and 32 per cent is short.

Pastures are in fair condition in the region, with 45 per cent rated as good, 54 per cent as fair and two per cent as poor.

Crop damage this past week is due to light frosts, waterfowl and wind. Producers are busy combining and working their fields for the fall. Producers are also working cattle, hauling bales and preparing for the winter.

Northwestern Saskatchewan:

- Crop District 9AW – Shellbrook, North Battleford, Big River and Hafford areas
- Crop District 9B – Meadow Lake, Turtleford, Pierceland, Maidstone and Lloydminster areas

A dry week meant rapid harvest progress in the northwest region. Producers in the northwest have been busy combining this week and are now 75 per cent harvested for the year. This is ahead of the five-year average of 45 per cent.

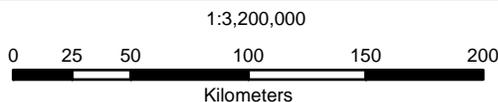

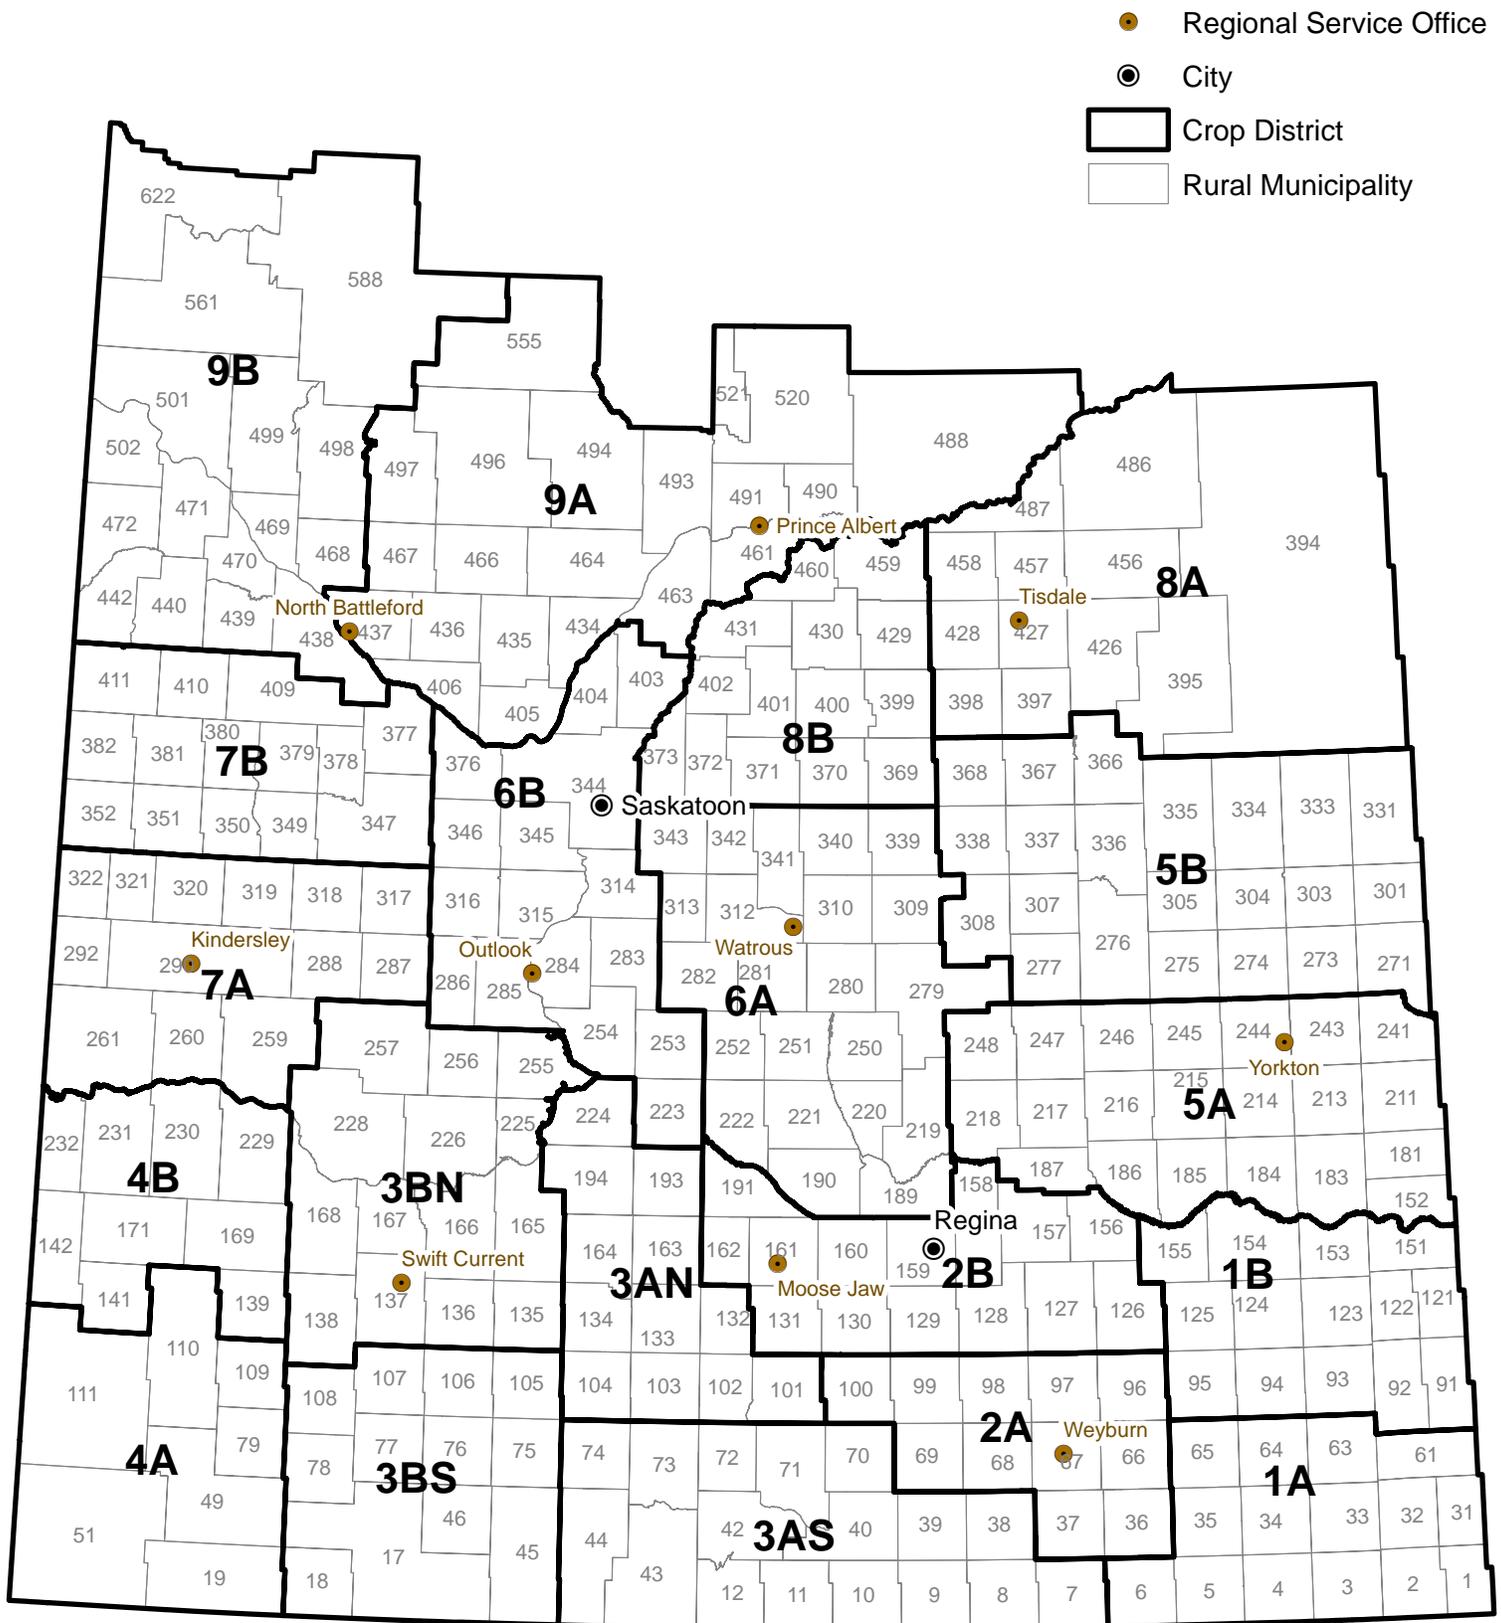

Producers are completing their spring seeded cereals this week and turning their attention to their oilseeds. Barley is 85 per cent complete, spring wheat is 83 per cent and oats are 80 per cent complete. Sixty-four per cent of canola is in the bin for the year, while producers are waiting for flax to dry-down and have not yet started combining. Fall cereals, field peas and lentils are harvested for the year.

The St. Walburg area received the most rain this week, recording just three mm. Topsoil moisture is beginning to be limited, with 37 per cent of cropland having adequate moisture, 55 per cent is short and eight per cent is very short. Thirty-five per cent of hay and pastures have adequate moisture, 52 per cent are short and 13 per cent are very short.

Pastures are experiencing the effects of a dry summer. Thirteen per cent of pastures are in good condition, 46 per cent are in fair condition, 19 per cent are in poor condition and three per cent are in very poor condition.

Crop damage this past week is due to light frosts, waterfowl and wind. Producers are busy combining and working their fields for the fall. Producers are also hauling feed and bales, marketing cattle and preparing for winter.

Municipality No: A, B, C and D - more than one reporter

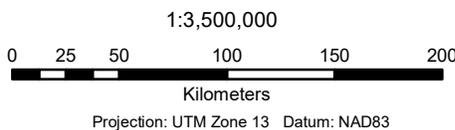

These precipitation amounts represent point locations within each municipality and do not necessarily reflect the whole R. M.

Cumulative Rainfall

from April 1 to September 18, 2023

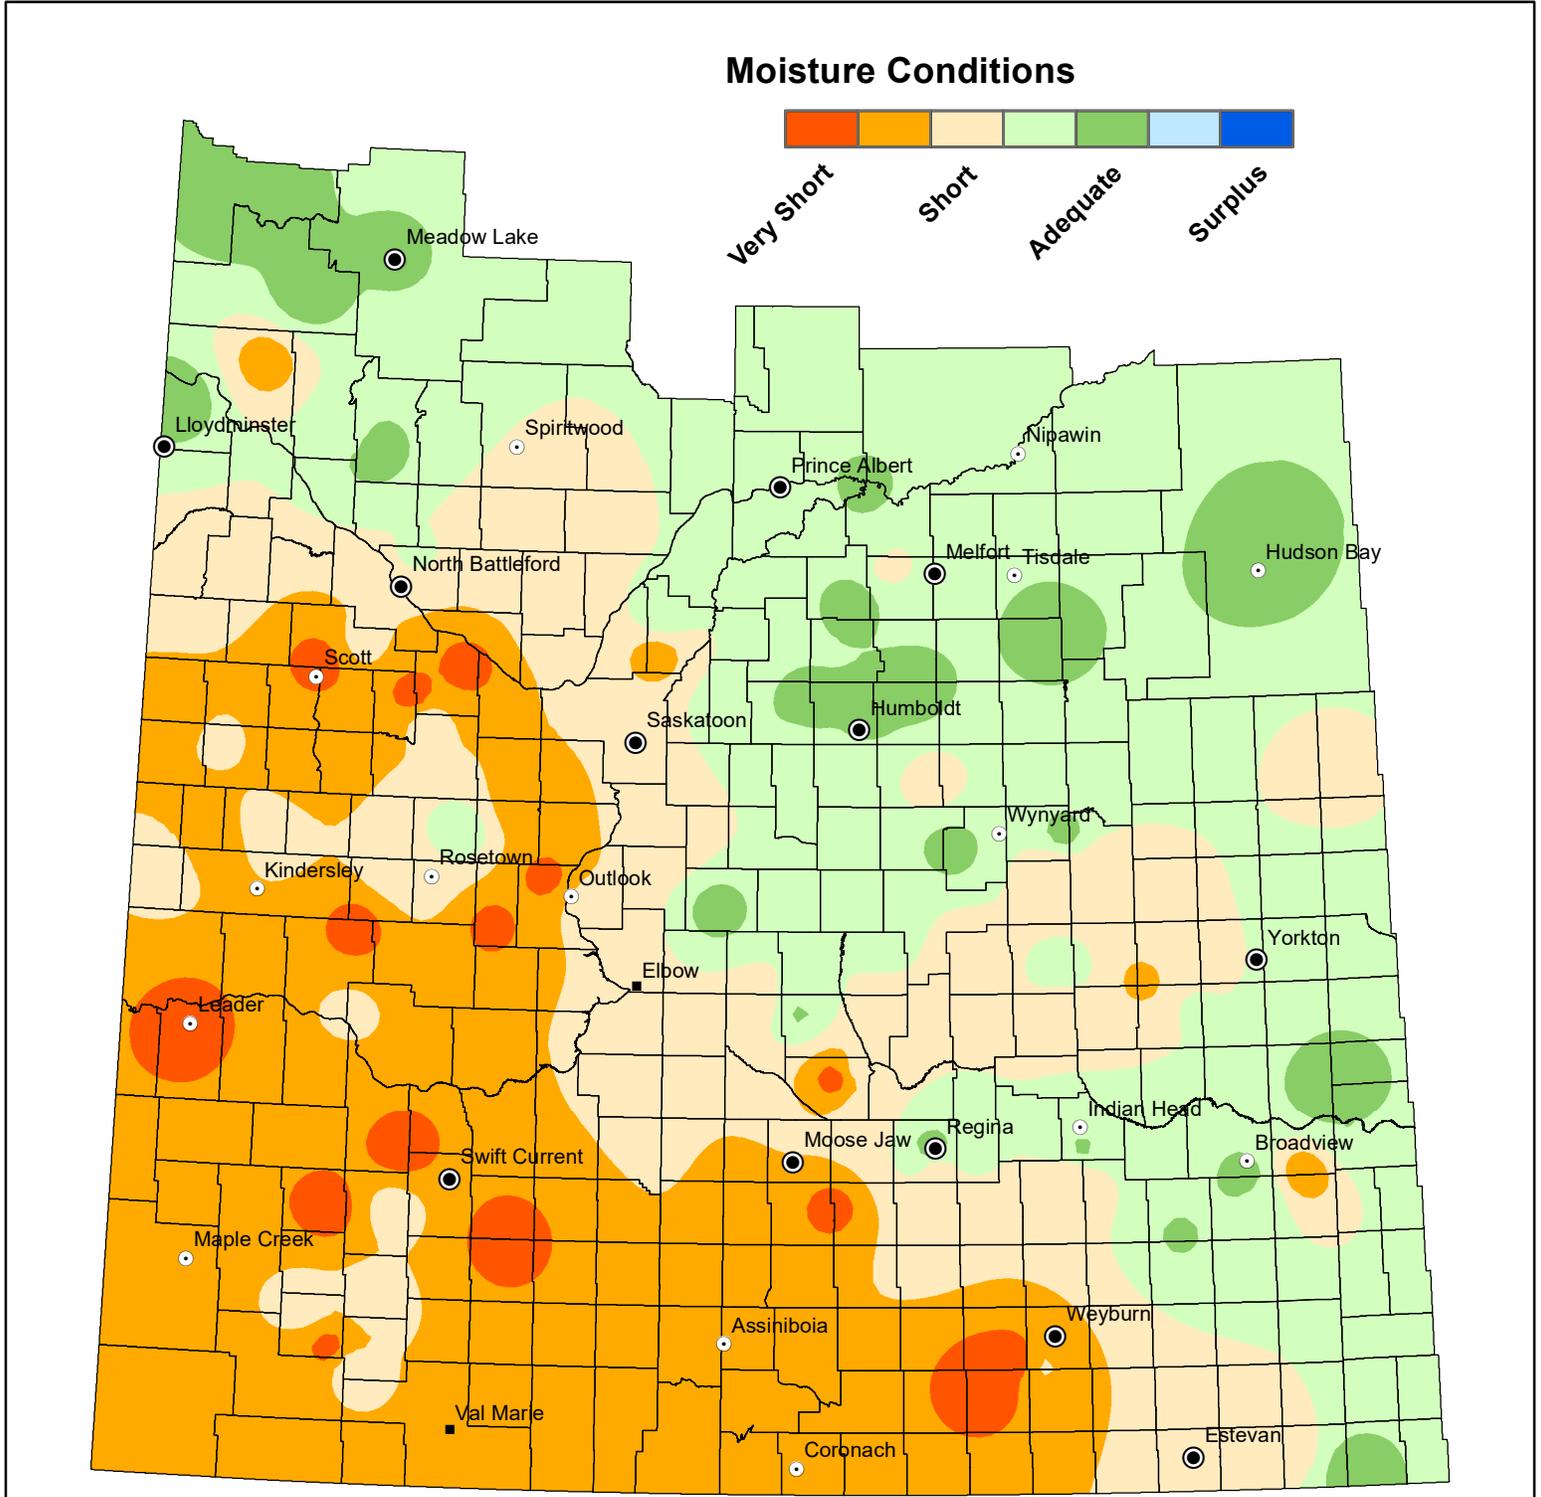

NOTE: Since techniques used to smooth the transition between zones can affect the values in localized areas, this map should be used for regional analysis only.

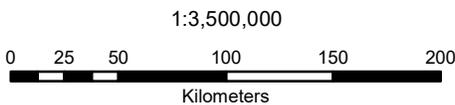

Data Source:
 Rainfall - Ministry of Agriculture, Crop Report Database
 The following is compiled and quality controlled by Agriculture and Agri-Food Canada: Saskatchewan Ministry of Environment (Wildfire Management Branch) and Environment Canada.
 IDW interpolation (power 2.5, fixed radius 300 km)
 Geomatics Services, Ministry of Agriculture September 20, 2023

Cropland Topsoil Moisture Conditions

September 18, 2023

NOTE: Since techniques used to smooth the transition between zones can affect the values in localized areas, this map should be used for regional analysis only.

Projection: UTM Zone 13 Datum: NAD83

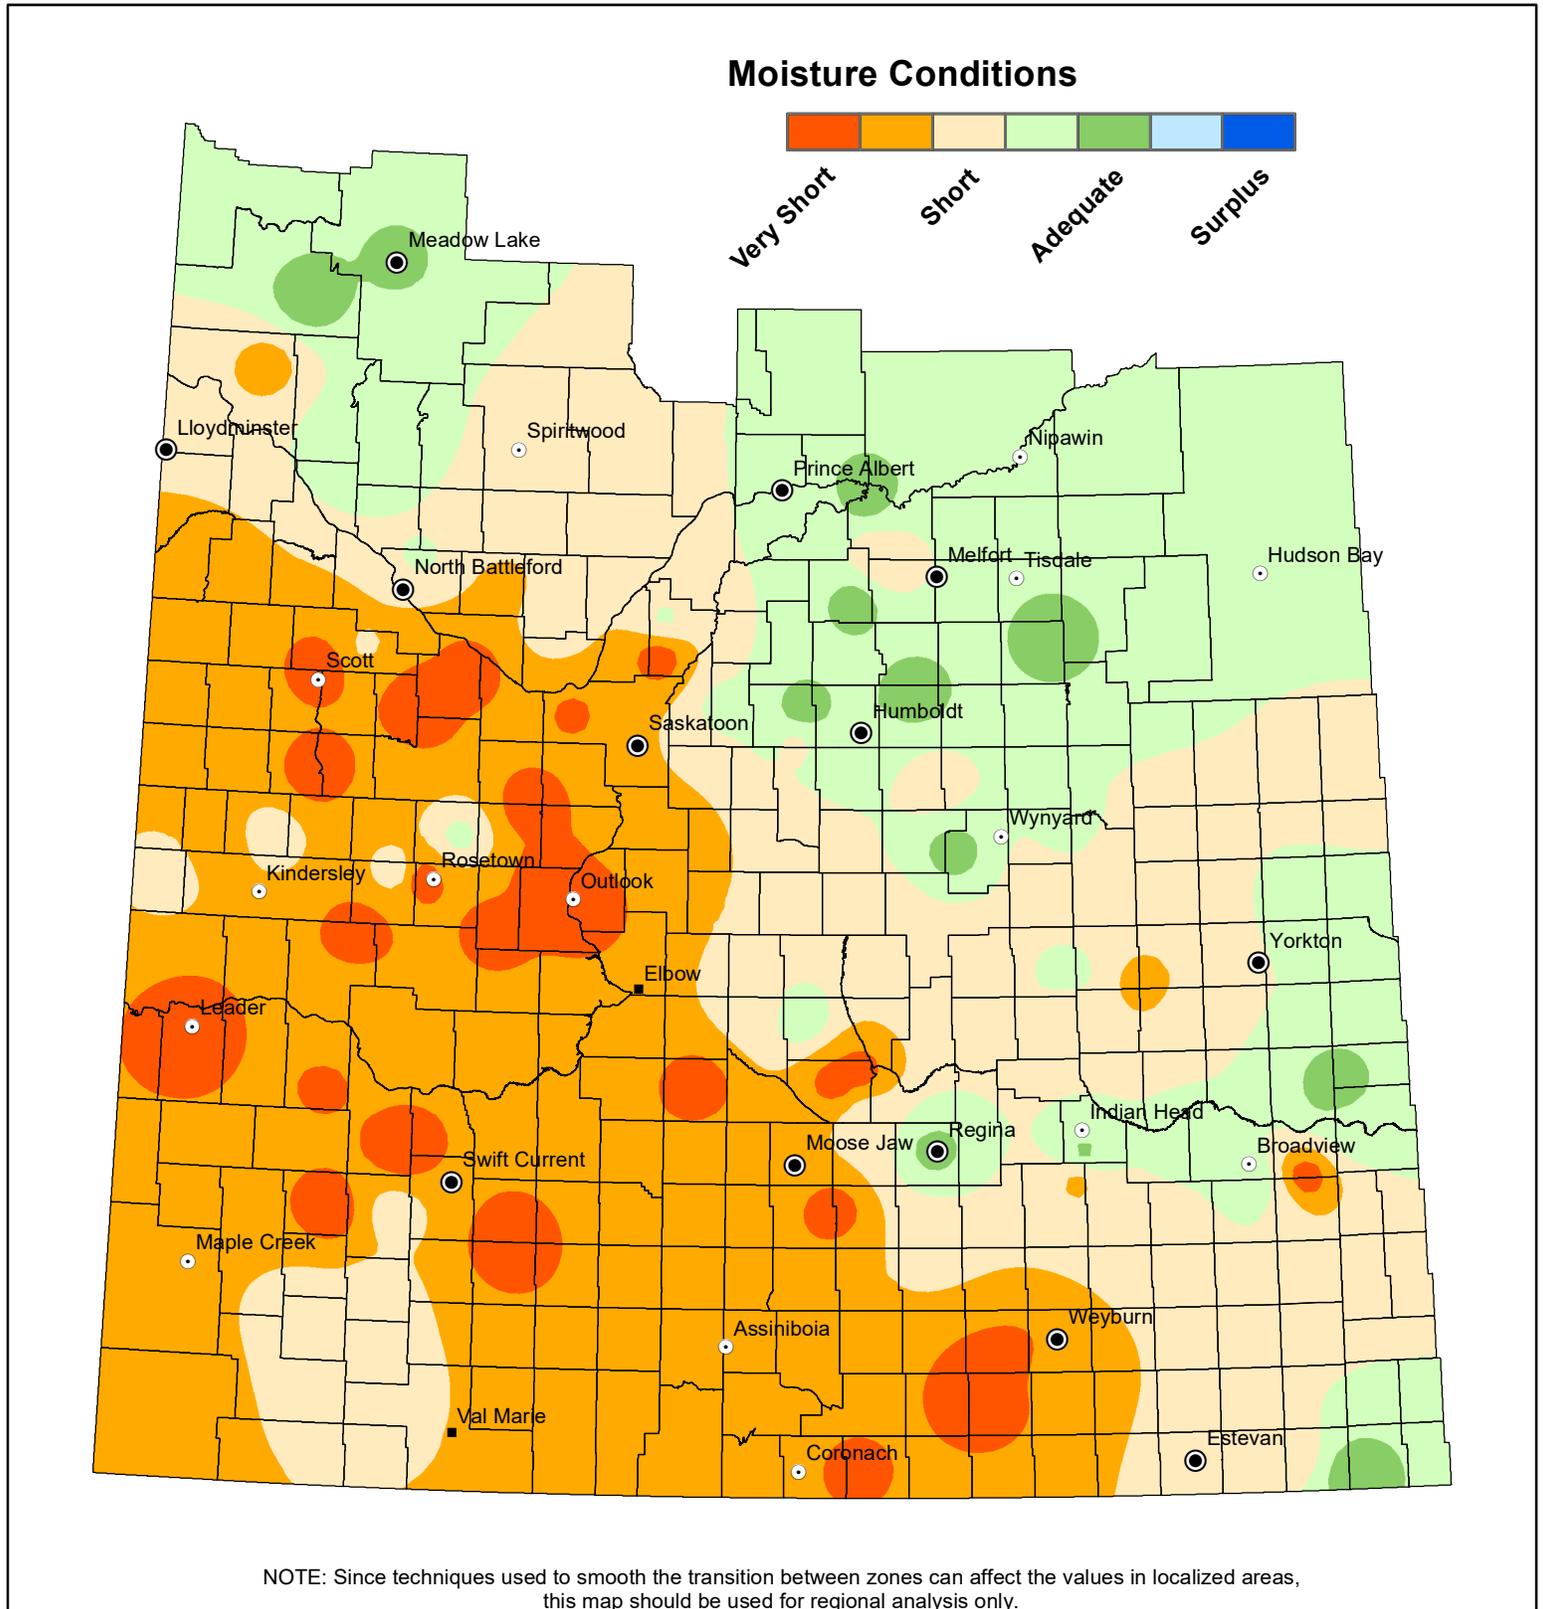

Data Source:
Moisture - Ministry of Agriculture, Crop Report Database
IDW interpolation (power 2.5, fixed radius 300 km)

Geomatics Services, Ministry of Agriculture

September 20, 2023

Hay and Pasture Topsoil Moisture Conditions

September 18, 2023

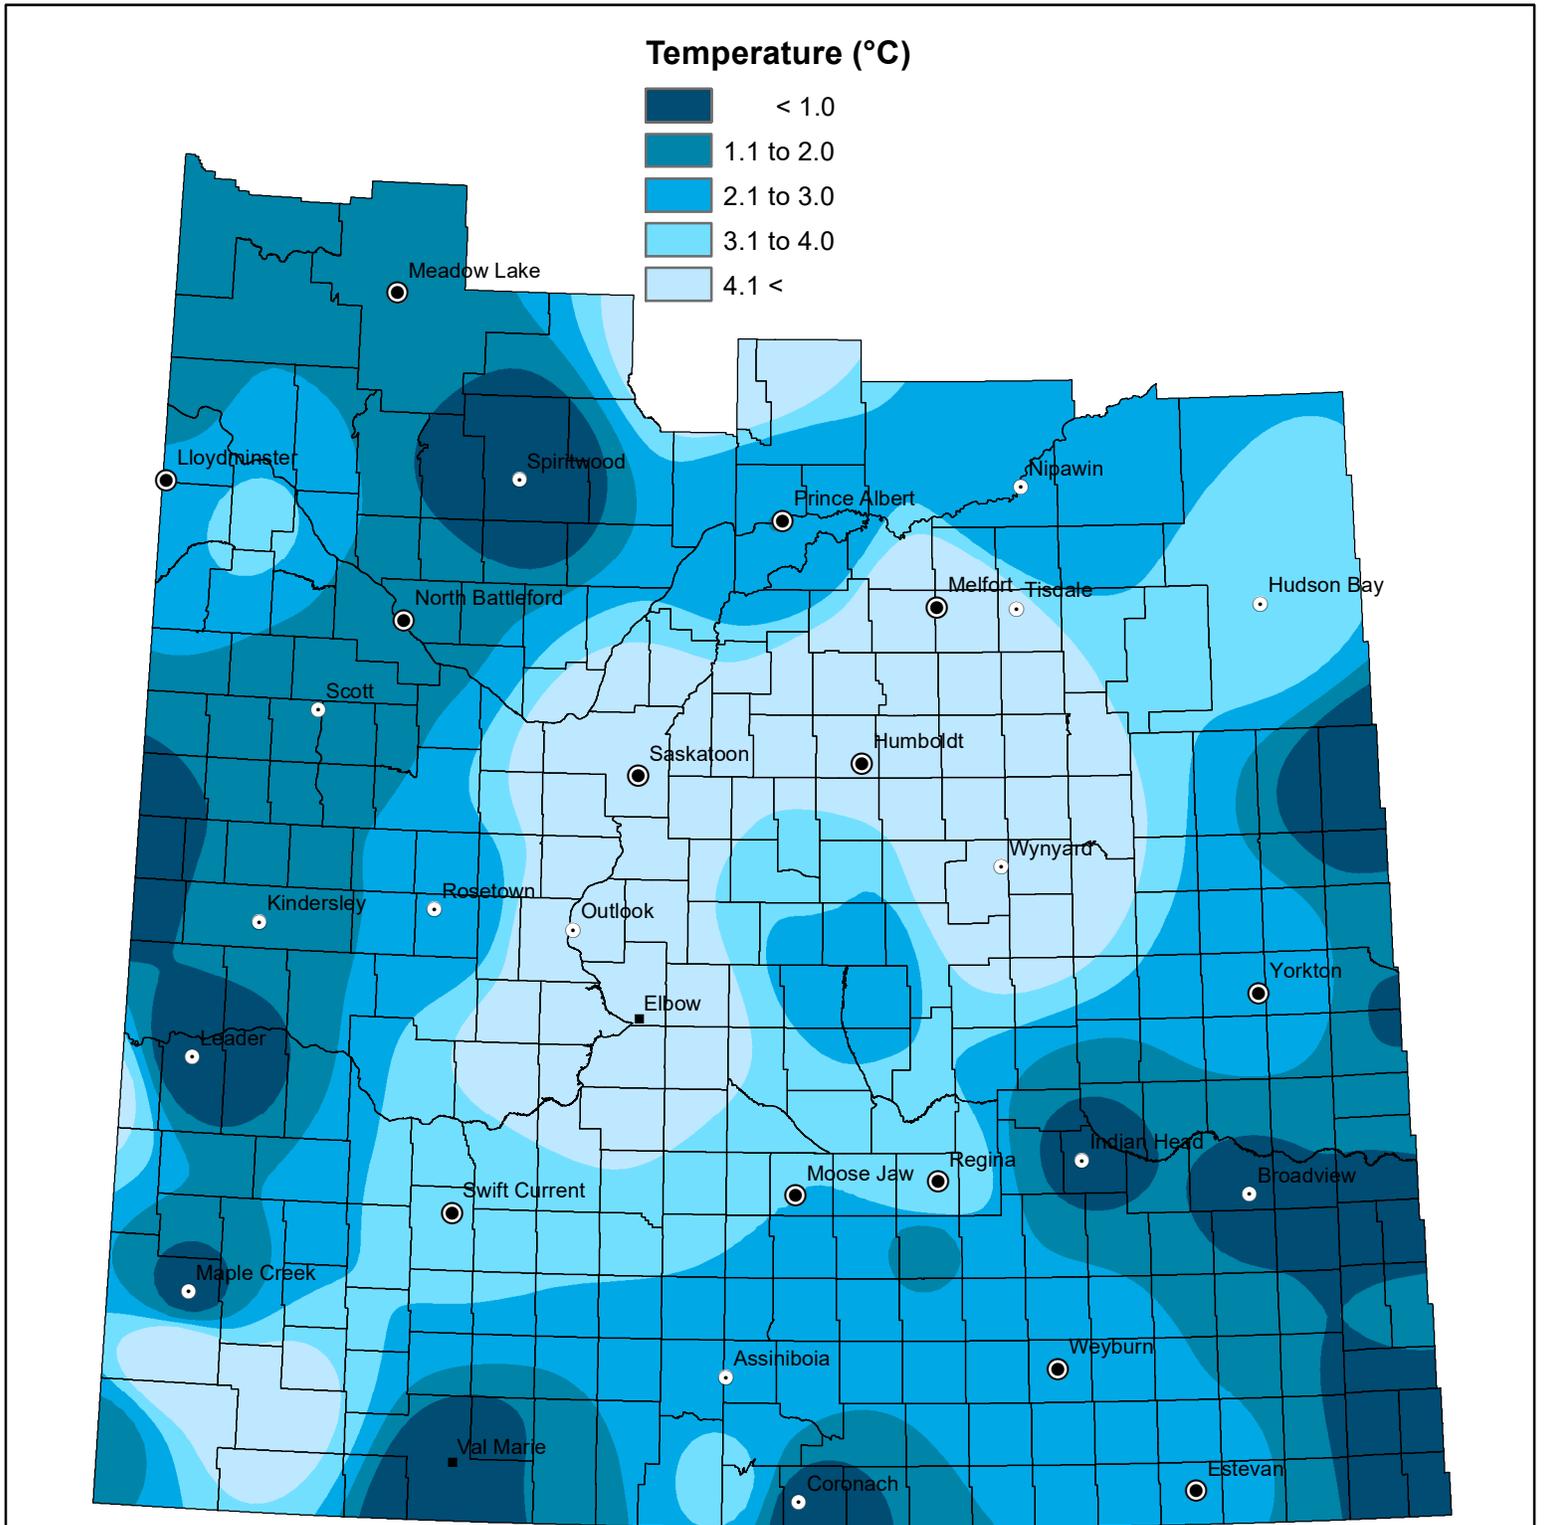

NOTE: Since techniques used to smooth the transition between zones can affect the values in localized areas, this map should be used for regional analysis only.

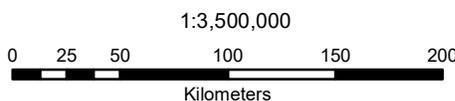

Minimum Temperature

from September 12 to September 18, 2023

NOTE: Since techniques used to smooth the transition between zones can affect the values in localized areas, this map should be used for regional analysis only.

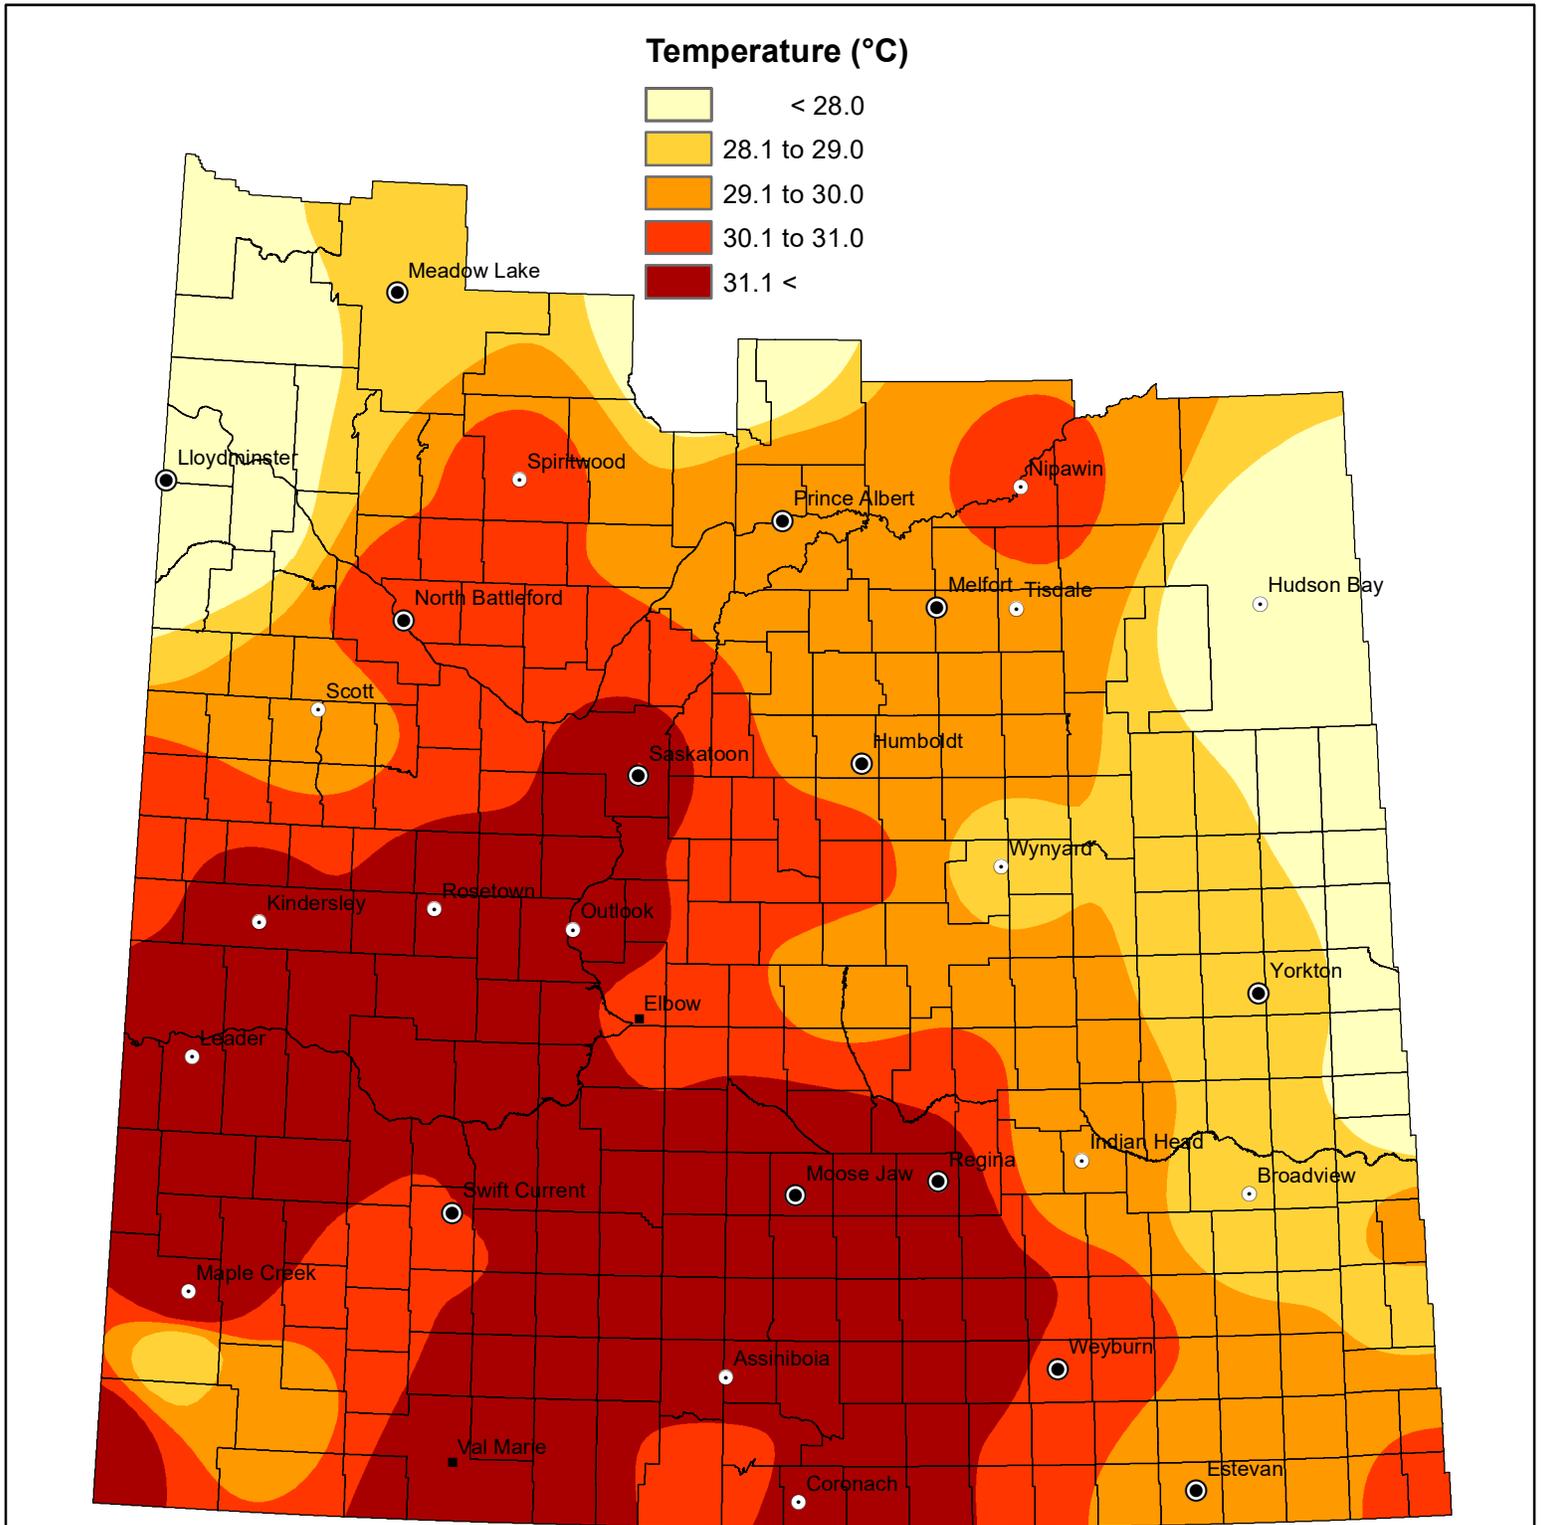

Projection: UTM Zone 13 Datum: NAD83

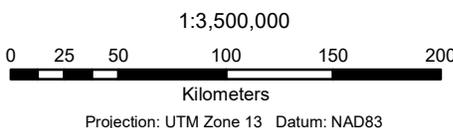

Data Sources:
 Temperature data - Saskatchewan Ministry of Environment (Wildfire Management Branch) and Environment Canada.
 Temperature data compiled and quality controlled by Agriculture and Agri-Food Canada
 IDW interpolation (power 3.5, fixed radius 300 km)
 Geomatics Services, Ministry of Agriculture September 20, 2023

Maximum Temperature

from September 12 to September 18, 2023

NOTE: Since techniques used to smooth the transition between zones can affect the values in localized areas, this map should be used for regional analysis only.
